

MARBLES

MOSAICS

PACKAGING: 0.75L, 5L, 20L

CONSUMPTION: 65 m²/Kg

GRIT SIZE Fine, Medium

TECHNICAL CHARACTERISTICS

Form:	Powder
Color:	Yellow
Odor:	Mild
Density at 20°C:	1 g/cm ³
pH:	2 (5% in water)
Flash point:	N / A
Freezing point:	0°C

To be stored at temperatures of 3°C to 30°C.

DESCRIPTION

Polishing powder for marbles. It is used after the last polishing grit and replaces polishing with the 5 EXTRA segments. It helps to achieve faster polishing and can be applied with lighter machines like those used for marble crystallization. Delivers excellent polishing and enhances the coloring of marbles, It can also be used for repolishing damaged floors.

INSTRUCTIONS FOR USE

Always read the product label. Wet the surface you want to polish. Work in small areas from 1 to 2 m². Pour a small amount of powder and cover it with the polishing machine with a fibrous disc attached. The white fibrous discs are the more suitable.

Polish the surface by slow movements from left to right and vice versa. If necessary, pour some water until a yellow mud is created. Add water as many times as needed to maintain this creamy consistency, never allow the material to dry out. If you haven't achieve the desired polish, you can repeat the process.

Once you have achieved the desired polish dilute with water, clean and proceed to the next area. You can remove the water from polished areas with a vacuum. When you have finished the polishing, mop the surface with a neutral detergent such as AP-302.

INFORMATION FOR STORAGE AND HANDLING

Wear protective gloves/protective clothing/personal protection for the eyes/person. If swallowed: call the poison center / doctor / ... if you feel unwell.

In case of contact with the skin (or the hair): Wash with plenty of water / ...
